## Cubi Theme Module

Cubi manages its GUI elements with themes. It is recommended that user interface resources including image files, css files, template files and etc are put into /cubi/themes/your\_theme/ folder.

Cubi default theme can be set in app\_init.php.

```
/* define themes const */
define('USE_THEME', 1);
define('THEME_URL', APP_URL."/themes");
define('THEME_PATH', APP_HOME.DIRECTORY_SEPARATOR."themes");
define('DEFAULT_THEME_NAME', "default");
```

A theme is chosen by the following sequence

1. From browser cookie which contains theme name
2. From url parameter with string like "theme\_name"
3. From DEFAULT\_THEME\_NAME defined in app\_init.php

## Manage Theme

Administrator can use Cubi theme management module to view all themes and create a new theme.

## View application themes

<input type="checkbox"/>		Openbiz Blue	Cubi default theme in light blue style.	0	Jixian			
<input type="checkbox"/>		New Theme	asasdasd asdsad	0	admin			

Click here to change theme

## Add a new theme

Clicking "Add" button will take user to "New Theme" page. When a new theme is saved, a new theme folder will be generated under /cubi/themes/. Alternatively, a new theme can be added by coping the default theme folder to the new theme folder and modifying theme.xml under the new theme folder.

## New Theme Package

Theme is a graphical appearance for this system. similar to a graphics skin.

Each theme package is contains custom UI component skin, css files and layout template.
