Updated Oct 27, 2011 by [rockys...@gmail.com](#)

Openbiz Framework

- Metadata oriented application development
- Model-View-Controller (MVC) design pattern.
- Object Relational Mapping (ORM) and query builder.
- Database Abstraction implementation on top of Zend_DB.
- Web Template support by integration with Smarty template engine and PHP template.
- Integration with Javascript libraries including Prototype and jQuery.
- Form input and data validation.
- Ajax-enabled UI widgets, such as grid, tree, auto-complete input field, and so on.
- Internationalization and localization (l18N and L10N). It supports message translation, date and time formatting, number formatting, and interface localization.
- Cache support. It supports query results caching, page caching and fragment caching. The storage medium of caching can be changed.
- Error, exception handling and logging. Errors are handled and presented more nicely, and log messages can be categorized, filtered and routed to different destinations.

Cubi Platform

- User, role, permission management. Support authorization via role-based access control (RBAC).
- Group based data visibility control.
- User authentication and user profile support.
- End user common operation support. Cubi has build-in user self registration, sign-in, sign-out, password recovery as well as my account page.
- Application navigation menu infrastructure
- User email service and email queue management
- Multi-theme generation and selection
- Multi-language pack generation and translation
- Application builder command line integration with Phing
- Application level security enforcement
- Metadata and code generation wizard for creating CRUD pages.
- Clean URL support
- Web service publishing helper
