- Apache version greater than 2.0
- Apache modules: mod\_rewrite, mod\_expires
- MySQL version greater than 5.0
- Linux/Unix operation system \*1

About Mac OS, Cronjob, Backup, Phing are need some system command or feature to works, if it has to run on Windows platform , don't worry the system general features will still functional.

## How to Install

To install a fresh instance of Openbiz Cubi please follow below steps:

1. Prepare your running environment like requirement described.

2. Download the release zip package
3. Extract the zip file into your web root folder.
4. Give the root folder a writeable permission for your web server's user.

for linux: **chmod -R 777 ./cubi/**

5. Open your browser and goto <http://localhost/> following the system initial guide.
6. Done! Start your new develop life with cubi !

About database setting will be prompt during the system installation Cubi can create database instance for it self if you give it a root permission of your database. or You may want it runs under a low privilege account, then you need to manual create the database and set it during installation

## How to upgrade

To upgrade your Openbiz Cubi instance from a existing version, you need to follow below steps:

1. Backup all your existing data !
2. Download the release zip package
3. Extract the zip file into your a new folder.
4. Delete following files from the folder
  - /Application.xml
  - /bin/app\_init.php
  - 1. Copy and override all files to your existing running cubi folders
  - 2. in each major release , there might be some module version changes.

You need to login cubi as administrator and go to module management and click "Load Module" button to load all new changes.

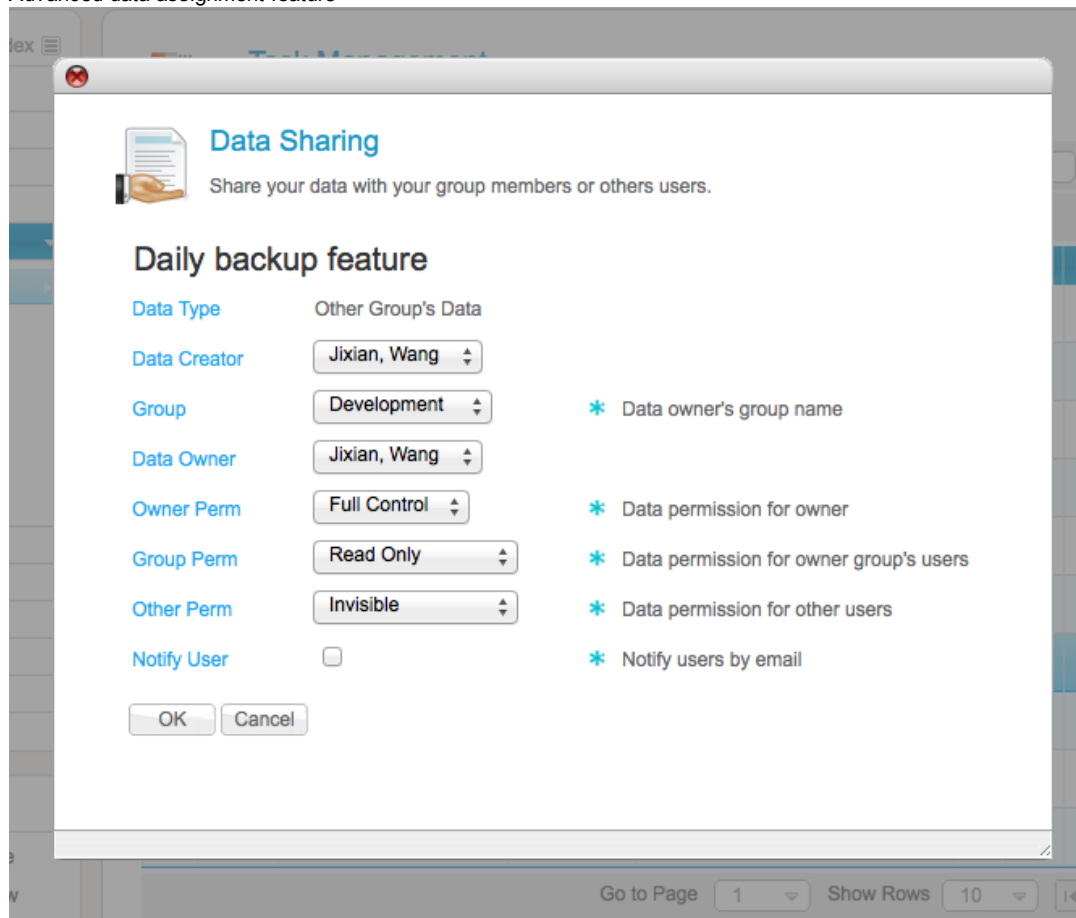

1. Logout by click the logout link in right-top conner , and re-login the system.
2. Done!, Now enjoy and upgrade your apps to use new features.
