Introduction

The best way to learn a new programming language is from examples and the fastest approach to build an application is copy-and-paste from samples. This book uses Cubi Trac to demonstrate the steps to create a real world application on top of Openbiz Cubi platform.

Before start the first chapter, if you haven't installed Cubi, please read [Cubi Installation Guide](#) to set up Cubi.

All source code in this book can be download from <https://openbiz-cubi.googlecode.com/svn/trunk/docs/learnbyexamples>

Table of index

- [Chapter 1. Application Design](#)
 - [Feature requirements](#)
 - [Pages design](#)
 - [Database design](#)
- [Chapter 2. Implementation Phase 1 - Prototyping](#)
 - [Write Trac Module](#)
 - [Load Trac Module](#)
 - [How things work](#)
 - [Test ticket page](#)
- [Chapter 3. Implementation Phase 2 - Add Components](#)
 - [Add Components](#)
 - [Change ACL and Menu](#)
- [Chapter 4. Enrich Ticket Forms](#)
 - [Change List Form](#)
 - [Use Table Join](#)
 - [Change Edit Form](#)
- [Chapter 5. Ticket Comments and History](#)
 - [Have a Separate Ticket Detail Page](#)
 - [Customize Form Logic](#)
 - [Ticket Email Service](#)
- [Chapter 6. Add Ticket Attachment](#)
 - [Use Cubi Attachment Form](#)
 - [Have Attachment Template File](#)
 - [Link Change History and Attachment to a Ticket](#)
- [Chapter 7. Fine Tuning](#)
 - [Change Ticket Form Layout](#)
 - [Add Search and Filter on Ticket List](#)
 - [Build Other Ticket Pages](#)
- [Chapter 8. Beyond Development](#)
 - [Build and Deploy](#)
 - [Multi-language Support](#)
 - [Make a New Theme](#)
 - [Secure Your Work](#)
 - [Tune performance](#)
 - [Manage users and roles](#)
